### syspkgs

- Contact: [tech-install](#), [tech-misc](#)

syspkgs is the concept of using pkgsrc's pkg\_\* tools to maintain the base system. That is, allow users to register and components of the base system with more ease.

There has been a lot of work in this area already, but it has not yet been finalized. Which is a diplomatic way of saying that this project has been attempted repeatedly and failed every time.

Beginner

## Other things (My Problem)

- How to commit my changes to source tree.

I understand. Just “cvs commit ...” to repository. Thank you mef@ and maya@.

- How to send e-mail from @NetBSD.org (mutt on mail.NetBSD.org?) with my PGP sign.

change “From:” line in my mail client.

- My machine said “uncorrectable data error reading fsbn ...”.

It is hardware problem. Of course, I bought new SSD.

Thank you
